

Dear Parents and Carers,

As part of our ongoing commitment to high-quality teaching and learning, we are excited to introduce a new educational tool that will be used in our classrooms: [Learn Anything](#). This AI-powered platform is designed to support both students and teachers by offering immediate, personalised feedback, while also teaching students how to use modern technologies responsibly and effectively.

Supporting Learning with AI

Learn Anything provides a number of important benefits for students:

- **Instant, tailored feedback.** Unlike traditional marking, which can take days, Learn Anything offers immediate responses to student writing and answers. This allows pupils to make timely improvements and better understand where they went wrong. Research has shown that AI feedback improves revision quality, student motivation, and engagement:

- **One-to-one tuition.** The platform adapts to individual students, offering hints, explanations, and guidance similar to a private tutor. This form of intelligent tutoring has been shown to significantly improve student progress:

- **Better engagement.** As well as improving outcomes, AI tools like Learn Anything have been shown to boost students' confidence and perseverance in learning:

- **Equal access to support.** While one-to-one human tutoring remains ideal, it is often not feasible in practice. This platform offers similar benefits on a much more scalable basis:

How It Will Be Used for Marking

Learn Anything will be used primarily to assist with **marking written work and short-answer questions**. It provides feedback to students almost instantly and highlights areas for improvement based on their specific response.

However, teachers remain fully involved in the marking process. All AI-generated feedback is reviewed by the teacher, and final grades, comments, and assessments are decided by a human professional. The AI acts as a first-draft assistant — helping reduce workload and giving students quicker feedback — but it does not replace teacher judgement or oversight.

This hybrid approach means students benefit from faster feedback and more opportunities to improve their work, while teachers retain full control over the learning journey.

A Safe and Focused Learning Tool

We want to reassure you that Learn Anything has been designed with clear boundaries:

- The AI only responds to academic prompts and stays strictly on topic.
- It does **not** engage in off-topic or casual conversation.
- If a student attempts to misuse the system (for example, by asking it to complete work dishonestly or initiating inappropriate chat), the platform **alerts the teacher immediately**.

- Teachers can see all AI interactions and will continue to guide students in how to use these tools responsibly.

Preparing Students for the Future

Learning to use AI well is becoming a vital skill — not just for school but for life beyond it. With guidance, students will learn how to use tools like Learn Anything to improve their thinking, reflect on their progress, and become more independent learners.

If you have any questions or would like to know more, please don't hesitate to get in touch. We are confident that this technology will offer real value in the classroom and help us continue to provide the highest standard of education.

Yours sincerely,

[Your School Name]
